This sequence encodes the mouse A55 protein. The invention relates to th human A55 protein. The protein can be used for the treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be used according their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or re-narrowing by vascular endothelial thickening after percutaneous transluminal coronary angioplasty (PTCA), or myoma, haematopoietic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actin/inhibin activity, taxis and chemotaxis activity, blood coagulation/thrombotic activity, receptor/ligand activity, and a catherin/tumour metastasis inhibiting activity; tumour inhibition, and a catherin/tumour metastasis inhibiting activity; tumour inhibition, and a

                                                                                                                                                                                                                                                                          The invention provides mouse polypeptides for treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be produced by standard recombinant methodology. The polypeptides can be used according to their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or renarrowing by vascular endothelial thickening after percutaneous transuluminal corronary angioplasty (PTCA), or myoma, hematopoietic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actin/inhibitin activity, taxis and chemotaxis activity, blood coagulation/thrombotic activity, receptor/ligand activity, cadohelin/tumour metastasis inhibiting activity; tumor inhibition, and as nutrient. The present sequence represents a DNA encoding the protein of the invention which can be used for modulating smooth muscle cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cell proliferation; vascular; smooth muscle cell; arteriosclerosis; PTCA; endothelial thickening; percutaneous transuluminal coronary angioplasty; myoma; hematopoletic cell-regulation; cytokine; tissue generation; taxis; actin activity; chemotaxis; blood coagulation; thrombotic; tumor; mouse;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                       This sequence encodes the mouse A55 protein. The invention relates to the human A55 protein. The protein can be used for the treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be used according their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or re-narrowing by vascular endothelial thickening after percutaneous transluminal coronary angioplasty (PTCA), or myoma, haematopoietic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actin/inhibin activity, taxis and chemotaxis activity, blood coagulation/thrombotic activity, receptor/ligand activity, and as cadherin/tumour metastasis inhibiting activity; tumour inhibition, and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A55 protein; mouse; smooth muscle proliferation; tissue generation; wascular smooth muscle cell; arteriosclerosis; tissue reparation; myoma; vascular endothelial thickening; had attacopoletic cell-regulator; cytokine percutaneous transluminal coronary angioplasty; blood coagulation; PTCA; actin; inhibin; chemotaxis; thrombosis; cadherin; therapy; tumour metastasis inhibitor; ss.

                                                                                                                                         The invention provides mouse polypeptides for treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be produced by standard recombinant methodology. The polypeptides can be used according to their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or remarrowing by vascular endothelial thickening after percutaneous transuluminal coronary angioplasty (PTCA), or myoma, hematopoietic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actin/inhibitin activity, taxis and chemotaxis activity, blood coagulation/thrombotic activity, receptor/ligand activity, cadohelin/tumour metastasis inhibiting activity; tumor inhibition, and as nutrient. The present sequence represents a DNA encoding the protein of the invention which can be used for modulating smooth muscle cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mus musculus

                                                                                                                                                                                                                        The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.

                                                                                                                                                                                                                                                                                                    The invention relates to a novel polynucleotide which is at cleast 95% identical with a sequence (AFCC 97285) encoding mature human CC extracellular protein-like/poldermal growth factor (EGF)-like protein, EEGF. Also included are the EEGF EGF domains, a vector containing CC the polynuclectide, a host cell containing the vector, anti-EEGF CC antibodies and antagonists of EEGF. The polynuclectide is used for recombinant production of EEGF, in gene therapy, as hybridisation probes, CC as antisense antagonists and for chromosome identification. The protein CC is used to treat patients who require EEGF, to identify specific CC antagonists, used to treat conditions that require inhibition of EEGF CC (e.g. vascular smooth muscle cell proliferation, Marfan syndrome, wound CC healing, neurological trauma, acquired immunodeficiency syndrome CC (AIDS)-related dementia, ocular disorders, kidney disorders, liver C disorders, hair follicle growth promotion, burns, ulcers, corneal incisions, corneal inflammation, neoplasms and psoriasis), to raise specific antibodies and to characterise receptors. The present

This sequence encodes a novel human extracellular/epidermal growth CC factor-like protein, EEGF. This protein can be used to regulate vascular smooth muscle cell proliferation and for restoration or commencement of neurological functions diminished as a result or other CC enhancement of neurological functions diminished as a result or other CC damaging pathologies such as AIDS dementia. The protein can also be used to treat senile dementia, coular disorders such as corneal inflammation, cor targetling tumour cells, for treating kidney disorders, for liver CC regeneration or treating liver dysfunction, for treating wounds including CC all cutaneous wounds, corneal wounds, and injuries to the cepithelial-lined hollow organs of the body or resulting from trauma such as burns, abrasions and cuts as well as from surgical procedures such as csurgical incisions and skin grafting. The polypeptides can also be used CC gromote hair follicular development, to stimulate growth and cc differentiation of various epidermal and epithelial cells in vivo and in vitro and to stimulate embryogenesis. Antagonists to EEGF can be used to treat neoplasia such as cancers or tumours, skin disorders such as corneal inflammation. The products can also be used for identifying EEGF receptors, detection, diagnosis and drug screening.
                                                                                                                                                                                                                                                                                                                                                                                              Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated extracellular/epidermal growth factor - used regulating vascular smooth muscle cell proliferation, e.g. enhancing neurological functions or treating neoplasia and

                                                                                                                                                                                                                                          The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.

cc primers for PRO polypeptides of the invention. The sequences of the climention can be used to detect the presence of a tumour in a mammal by cc comparing the level of expression of a PRO polypeptide in a test sample cc of cells from the animal and a control sample of normal cells, whereby a clipter level of expression in the test sample indicates the presence of a cc tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, cc years goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human cloud, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The CC stimulate the proliferation or differentiation of the condrovete cells. The CC proteins can be used to determine the presence of tumours and also conseptibility to tumour development, particularly adrenal, lung, colon, colorest, prostate, rectal, cervical, or liver tumours. In mammalian cc subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                      This DNA encodes a human extracellular matrix protein (ECMP)-1. cells containing a vector comprising the ECMP-1 nucleic acid arr for the recombinant production of the protein. ECMP-1 and its (ant)agonists, are useful in the diagnosis, prevention, and tree of cancer and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotide encoding useful in the diagnosis, predisorders and cancer

This is the nucleotide sequence of the human secreted protein AK647. The CC polynucleotide sequence was obtained from a human foetal kidney cDNA CC library. AK647 homologues in chicks and rodents are involved in aortic tissue development. The spatial and temporal distribution of AK647 CC indicated that it acts as an amodulator of smooth muscle cells in CC AK647 consists of multiple EGF domains. The primary structure of vasculogenesis during embryonic development. The primary structure of inducing, cytokine, cell proliferation and cell differentiation activity. CC inducing, cytokine, cell proliferation and cell differentiation activity. CC inducing, cytokine, cell proliferation and cell differentiation activity. Including severe combined immunodeficiency (SCID), HIV and other viral, bacterial and fungal infections. Regulation of immune content include a role in the regulation of haematopolesis and in the responses may also be carried out by the AK647 protein. Other uses of the protein include a role in the regulation of haematopolesis and in the creatment of uncerts and burns. CC as well as for wound healing and in the treatment of ulcerts and burns. CC ameliorating smooth muscle cell growth, vasculogenesis, restencis, can be used for preventing, treating or ameliorating smooth muscle cell growth, vasculogenesis, restencis, can be used for preventing. The proteins and tumour inhibition activity. AK647 specific contenting can be used for promoting smooth muscle cell growth or constant of ulcerts and burns. The proteins and drug screening.
                                                                                                                                                                                                                                                                                                                                  Ş

```

AAZ39892 standard; cDNA; 2362 ВP

AAZ39892

21-FEB-2000 (first entry)

sequence of the human secreted protein AK647.

AK647; aortic tissue development; smooth muscle cell modulator; SCID; nutritional supplement; vasculogenesis; embryonic development; infection; cytokine activity; cell proliferation; cell differentiation; detect; HIV; immune deficiency; haematopoiesis regulation; tissue regrowth; diagnose; wound healing; restenosis; atherosclerosis; drug screen; ss.

Homo sapiens
